NEXUS Documentation Completion Report

Date: 28 October 2026
Scope approved: documentation-only audit outputs plus the dependency compatibility repair; no application data or production settings changed.

Documents produced

- Master NEXUS User Manual — editable Markdown and PDF.
- School Administrator and Platform Super Admin Guide — editable Markdown and PDF.
- Finance and Operations Guide — editable Markdown and PDF.
- Teacher and Academic Operations Guide — editable Markdown and PDF.
- Marketing and Demonstration Handbook — editable Markdown and PDF.
- Functionality and Readiness Gap Report — editable Markdown and PDF.
- Role-based quick-reference guides, glossary, onboarding checklist and assessment answer key — editable Markdown.
- Documentation index/maintenance guide — editable Markdown.

Modules inventoried

Dashboard; People/Learners; Teachers & Staff; Classes & Streams; Curriculum Setup; Academic setup & progression; Teacher Allocations; Timetable Generator; Attendance; Academics/Assessments/Marklists; Reports/Report Cards; Academic Archives & Alumni; Guidance & Counselling; Finance & Resources; Fees; Finance; Procurement; Stores; Assets; Maintenance; Payroll; Transport & Fleet; Resource Hub; Resource Links; Library; Messages; NEXUS AI/Document Studio/Amal handoff; User Administration; School Registry; Audit Trail; Feedback; authentication, password recovery, school switching, backups and installer/deployment.

Verification completed

- TypeScript check: passed.
- Automated tests: passed, 18 test files and 80 tests.
- Production build: passed; large-chunk warning remains informational.

- Dependency compatibility: Express 4 now resolves its supported `path-to-regexp 0.1.12` API after removing the incompatible audit override that forced version 9 and caused `pathRegexp is not a function` at startup.
- Documentation PDFs: generated and file-size checked.
- No production database writes were made during this documentation batch.

Not fully verified

The sandbox did not provide a successful managed live-preview startup after the earlier deployment regression, so this batch does not claim a fresh browser smoke test. The gap report identifies source/test evidence versus unverified live flows. Windows/XAMPP installer acceptance, full live two-school database isolation, restore drills, external provider delivery, M-Pesa callbacks, KICD synchronisation, Amal API/SSO, and official statutory/financial filing remain pending or external configuration.

Important gaps discovered

1. Legacy multi-school paths and curriculum/settings scoping need hardening before broad SaaS onboarding.
2. Finance procurement, invoice, official receipt, asset lifecycle and maintenance work-order workflows are incomplete.
3. Password reset delivery needs a configured mail/SMS provider.
4. Report-card fallback/hard-coded template content must be configured before production printing.
5. Messages are queue-only; Amal is a new-tab handoff; M-Pesa ledger is callback-ready rather than a verified live gateway.
6. Backups/restore and Windows installer scripts require environment configuration and execution evidence.

Recommended next steps before commercial marketing

- Approve the gap report priorities and remediate Critical/High items.
- Run a disposable two-school browser/database acceptance test.
- Configure and test password-reset delivery, backups, alerts and restore.
- Replace/demo-watermark hard-coded report-card content.

- Decide whether Finance placeholders will be implemented or removed from sales demonstrations.
- Execute a clean Windows/XAMPP installer/update/rollback matrix.
- Capture fresh browser screenshots only after the preview is healthy.
